

NDPC Annual Meeting Gas Capture Panel

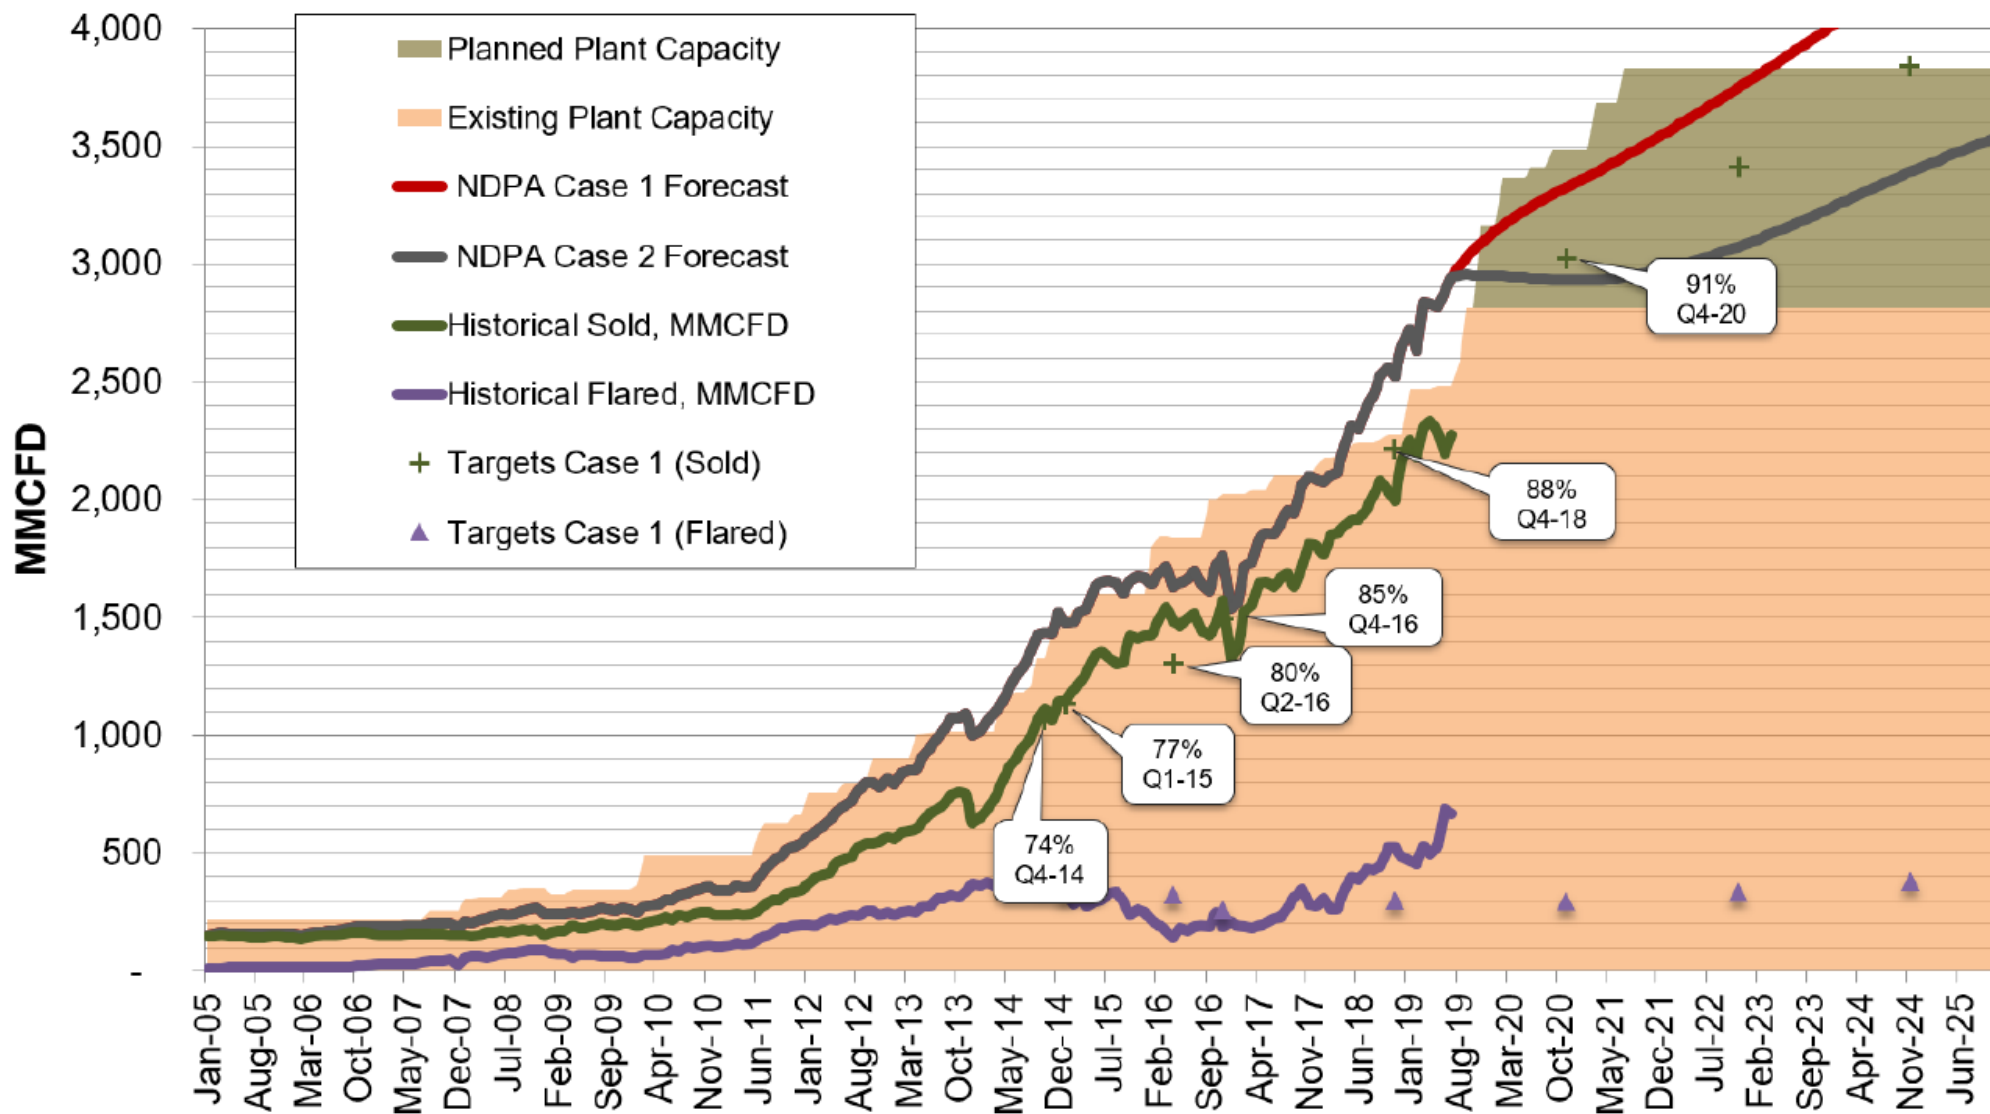

Moderator- Phil Archer, Whiting Oil and Gas

September 19, 2019 | Watford City

Solving the Flaring Challenge

Assumes Current Technology – Enhanced Oil Recovery Not Included

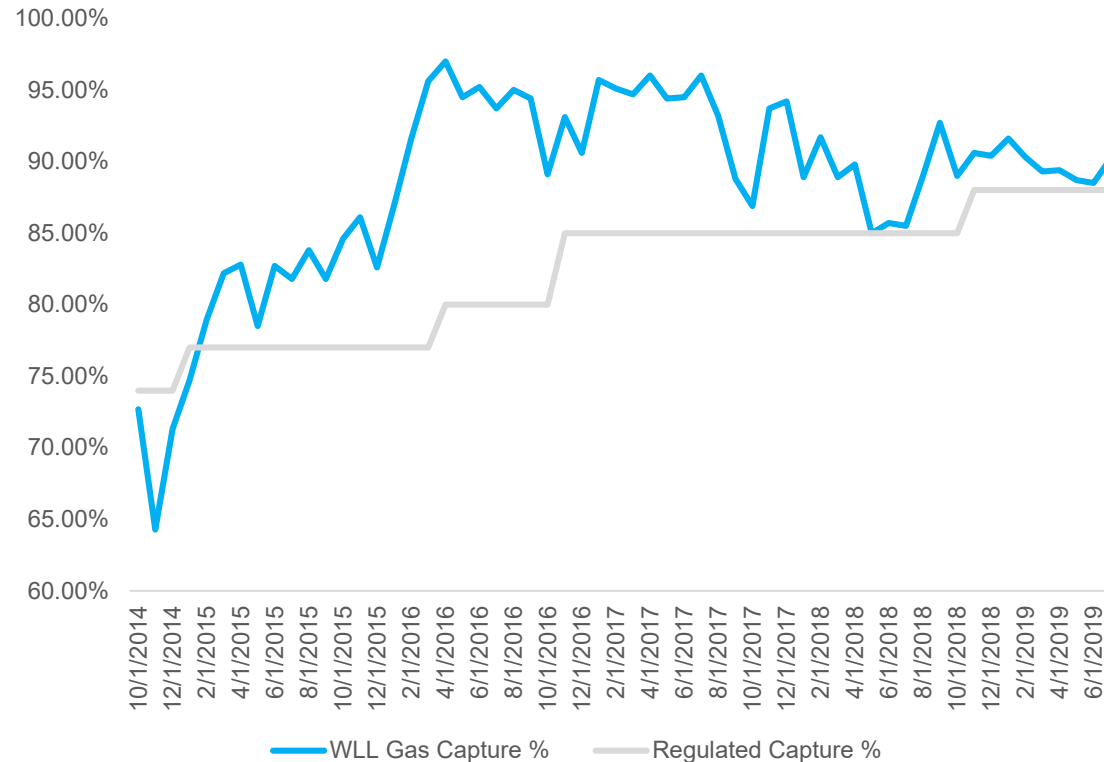

Ongoing Environmental, Social and Governance Initiatives

Whiting is a leader in Environmental Protection

In addition to complying with stringent federal and state air quality regulations, Whiting has consistently outperformed the NDIC requirement for gas capture since the regulatory requirement began.

- Through investment in infrastructure and gas plants Whiting has met or exceeded the requirement every month since 2015
- Our historical gas capture rate is 88% compared to the industry average of 76%⁽¹⁾
- Today, Whiting captures 90% of its gas and utilizes technology and combustion units, refusing to sacrifice environmental protections for production

Our plan is to build an enduring company with sustainability planning and reporting as a key component of our strategy
